TMDB - MS Access DB

Screenshots and Core Functionality
Code Last Updated for MS Office 2013 Release

What The User Sees

Load .accde files to experience the Database as a User

Highlights of the Database

- This presentation does not show everything the Database has to offer.
- It just shows menus and some highlights of major features and functionality
- The UI is configurable code that could be used to build other code
- Since not everyone has MS Access on a home or work system, these slides will help you see what was built
- Slides in this section were use screen captures from: TM-DB-MS2013v2_Demo.accde

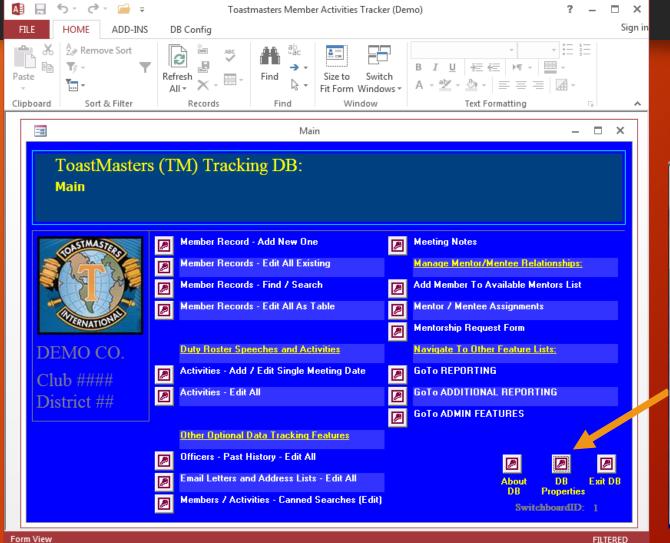

Main Splash Screen

Yellow dashboard entries are headings

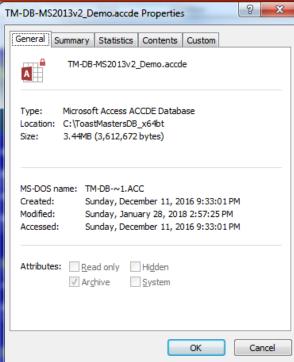

White entries trigger features or navigate to More dashboards with more feature links

Features include:

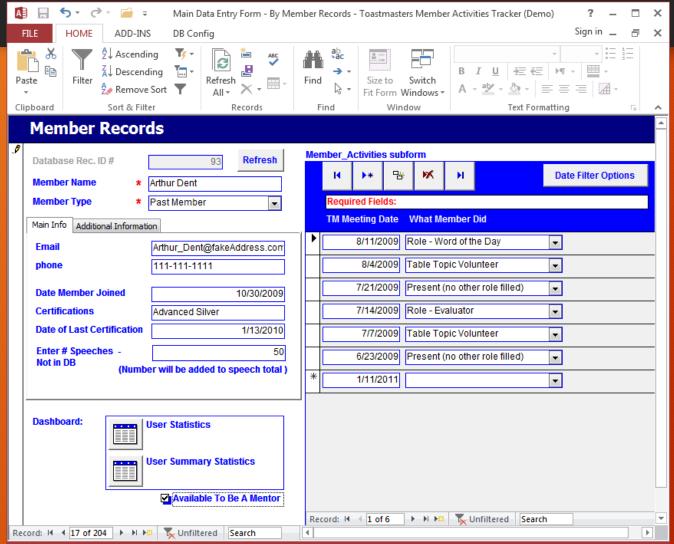

- Forms for Variety of Tasks
- Data Views
- Reporting that Exports Data to Excel
- Etc.

Corner buttons appear on all Dashboards

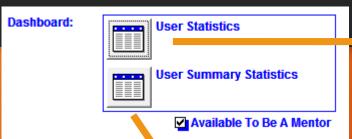

Add/Edit Club Member Records

Clicking Additional Information tab:

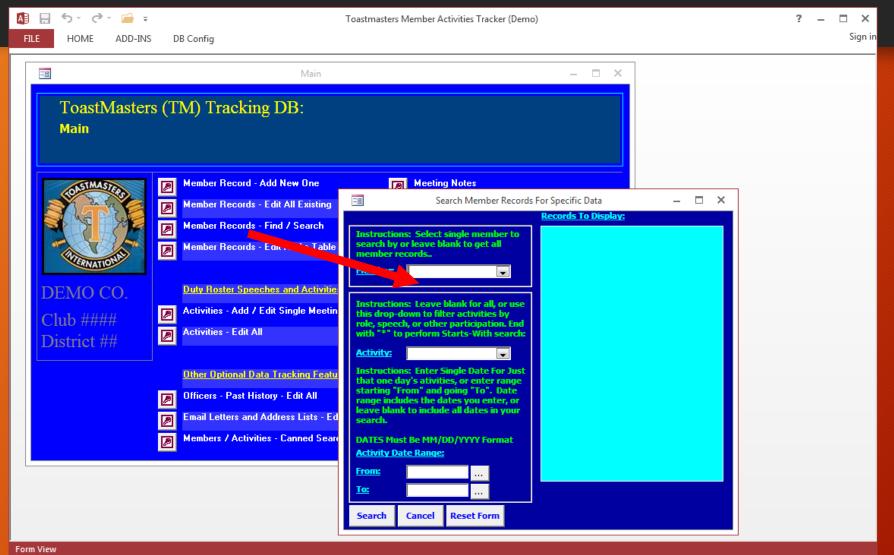

Clicking Dashboard Buttons (Prev. Screen)

	Arthur	Dent			TM Roles	2

Searching For Specific Member Records

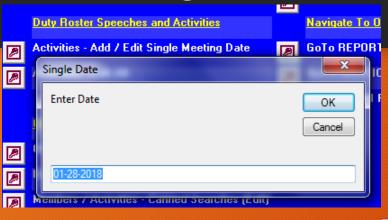

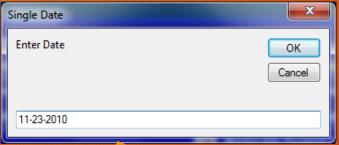

For Technical Users

- Search Screen exposes
 Query logic used by user selections
- This can help users understand SQL
- This can help admins debug a problem should one come up

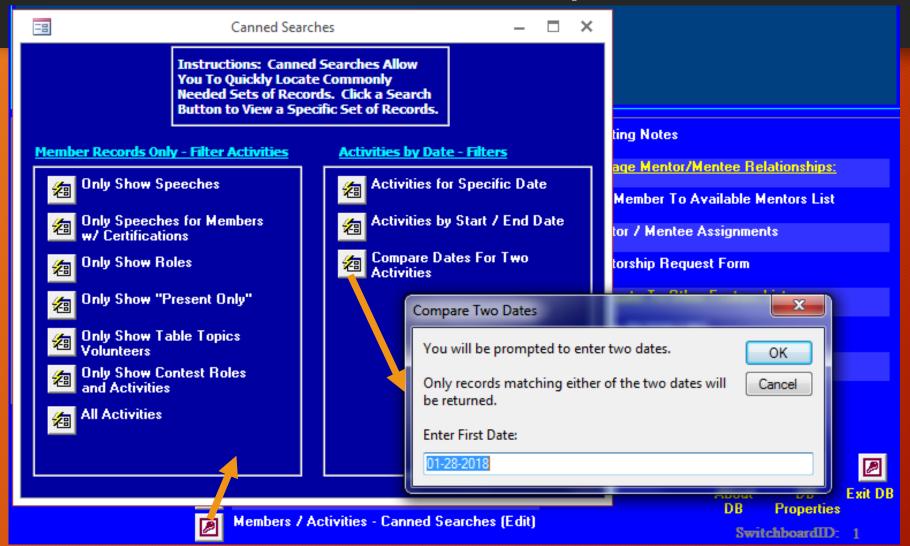

Editing Child Records by Specific Meeting Date

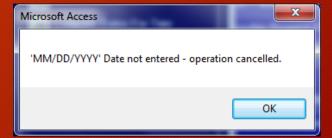

Canned Searches w/ Prompts to User

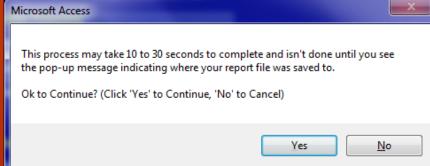

Example: User hits Enter w/o entering date:

Reporting Buttons Output Content To Excel

Messages warn users and allow them To cancel for reporting processes that May take a while:

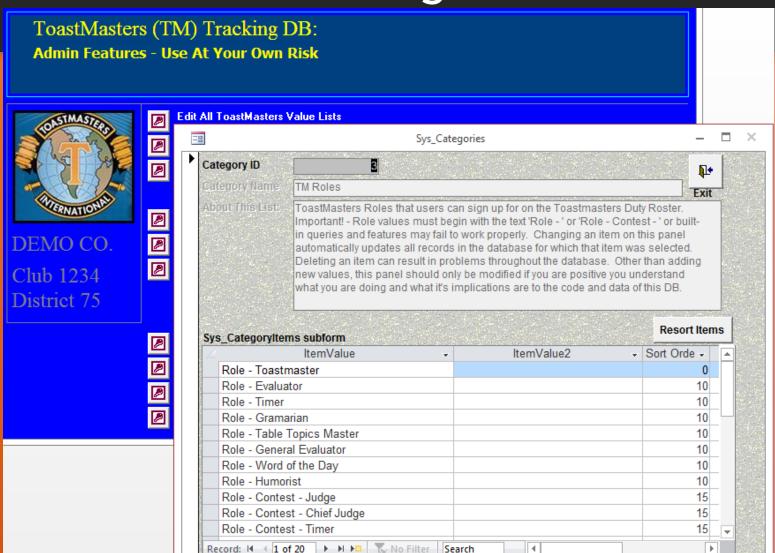

Admin Features

 Admin features allow limited customization of the text displayed by the UI and presents reporting more useful to Admins than general Users

This Includes Editing Lists Used in Drop Downs

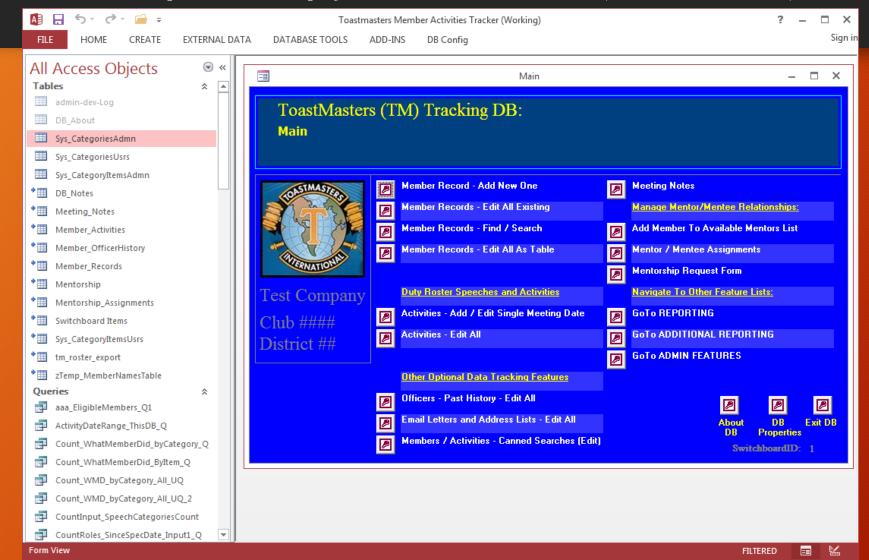

Developer and Trusted User Only Features

Developer Perspective

Load .accdb for Admin Access to Source Code .accde files generated from .accdb file

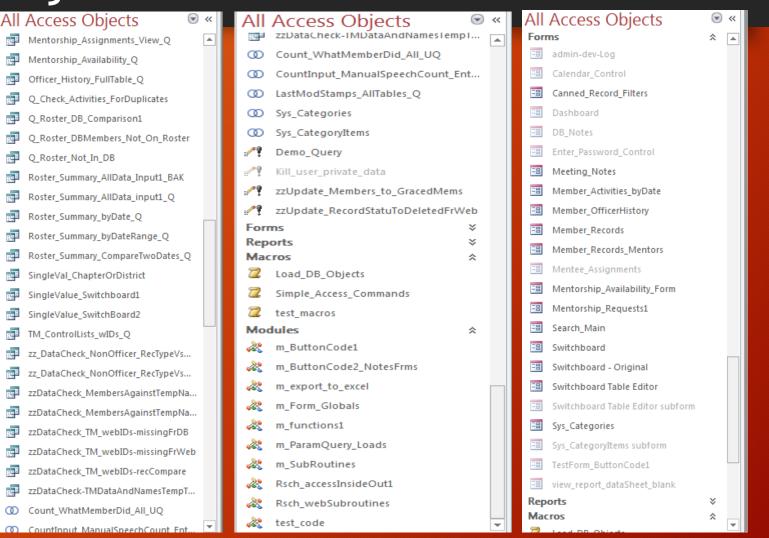

Developer Copy of The DB (On Load)

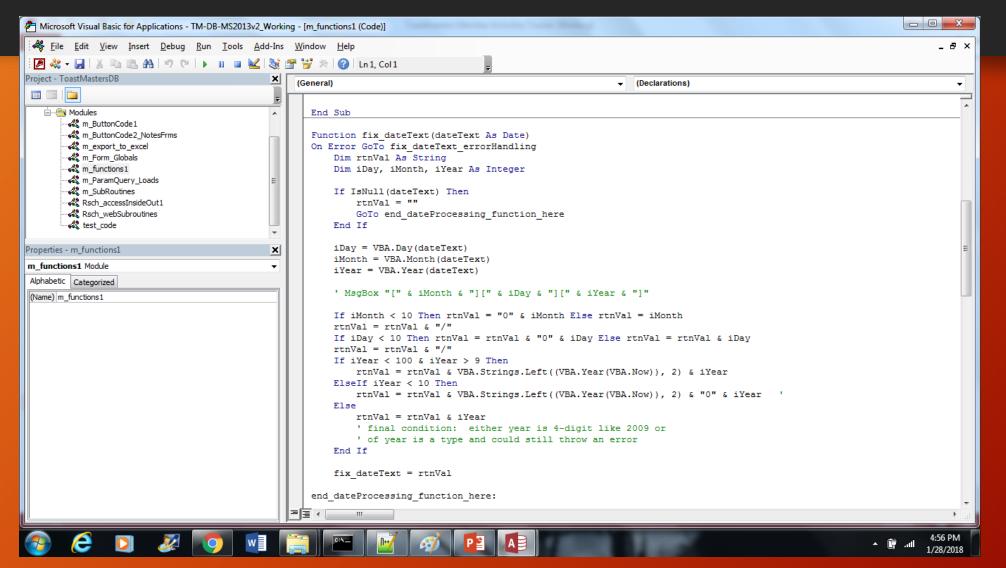

Scroll down of additional Objects in the "All Access Objects" Panel follows on Next Slide.

Code Modules In MS Access VB

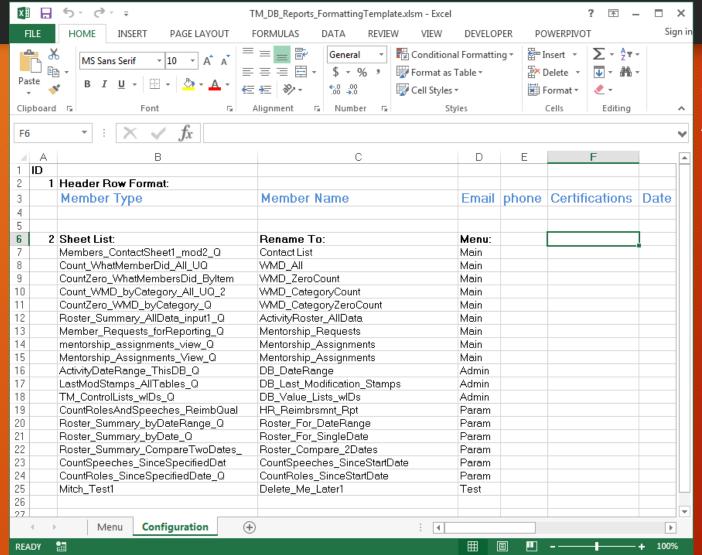

SQL in MS Access

Reporting In Excel

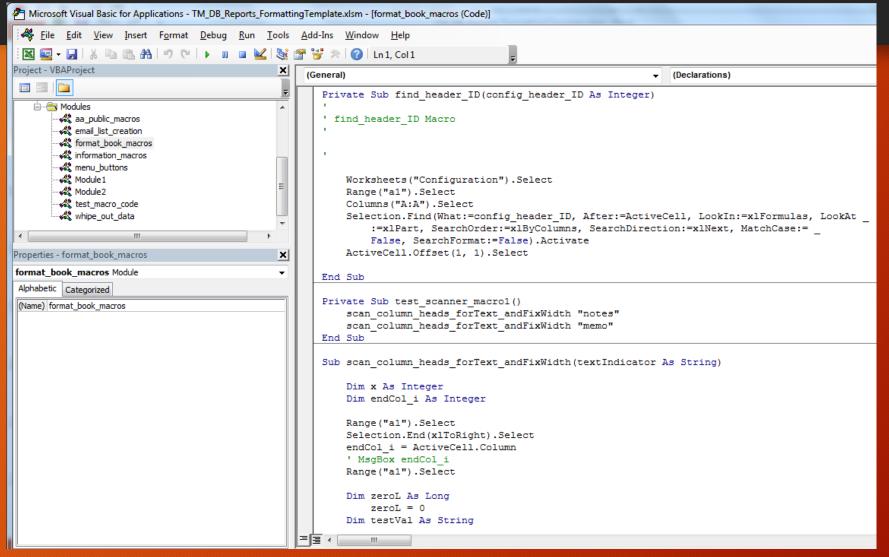

- Reporting start the process from MS Access
- Then it Hands The regults of SQL Queries off to Excel
- In Excel, a Template w/ DB takes over the process using Excel VB
- Access waits for it to finish and provides the user with a helpful message about where to find the resulting report

Excel File: Configuration Tabs

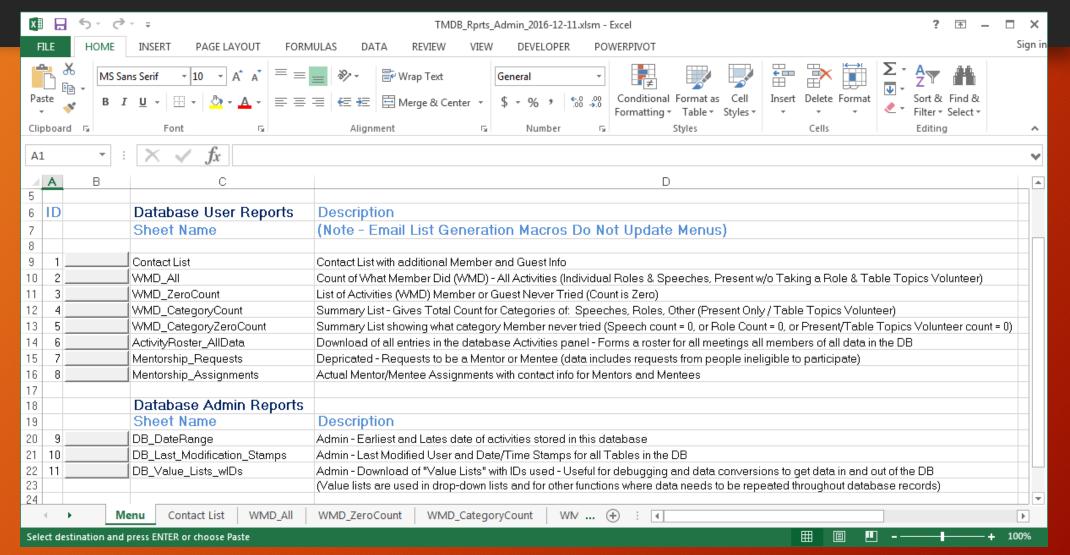

Some simple changes to reporting code Are handled as simple edits to the Excel file without having to edit the code

Excel VB (To Complete Reporting)

Menu Tab on Detailed Excel Workbook Output

The menu
Tab on reporting
Workbooks can be
Edited in the Code
Excel file w/o
Needing to edit
Actual VB code

Code modifies
This tab for each
Report type
